## Summary

The Cloud Capability Integrations Technical Initiative (CITI) project aims to provide cloud native services that increase our Mission Owner’s ability to deliver secure applications/services at a higher velocity.

We use a comprehensive cloud-native application protection platform with the industry’s broadest security and compliance coverage—for applications, data, and the entire cloud-native technology stack—throughout the development lifecycle and across hybrid and multicloud environments. The integrated approach eliminates the security constraints around cloud-native architectures—rather than masking them—and breaks down security operational silos across the entire application lifecycle, allowing DevSecOps adoption and enhanced responsiveness to the changing security needs of cloud-native architectures.

## Benefits

- Active Container Scanning
- Vulnerability Management
- Container Compliance
- CICD security
